Art Unit: 3711

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1 and 4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yoshimasa et al (JP 06-327791) in view of Egashira et al (5,439,227). Yoshimasa discloses a golf ball comprising a core and a cover. The core has a compression of 2.6 to 4.0 mm and the cover has a flex modulus from 1500 –3000 kg/cm2 (147 –294 Mpa). The specific gravity of the ball is greater than or equal to 0.5 but less than 1.0. The ratio of the flex modulus/deformation also falls within applicant's range 50 to 125 (ex. 200/3 = 66.7). Yoshimasa does not disclose a flex modulus for the cover between 300 and 500 Mpa. However, Egashira teaches a cover with a flex modulus from 200 to 450 Mpa. One of ordinary skill in the art would have modified Yoshimasa with Egashira to increase the durability of the golf ball.

Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over

Yoshimasa in view of Egashira et al (5,439,227) and further in view of Yamagishi

(5,695,413). Yoshimasa in view of Egashira does not disclose a compression above

4.0 as shown in claim 2. However, Yamagishi teaches a core deformation of at least

Art Unit: 3711

3.5 mm. One skilled in the art would have modified the compression/deformation of the core to achieve the desired hardness of the golf ball.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970);and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-4 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-2 of copending Application No. 09/854,693. Although the conflicting claims are not identical, they are not patentably distinct from each other because the present invention and the '693 application claim golf balls with overlapping property values. The '693 application claims a golf ball comprising a core and a cover. The deformation is from 3.0 to 6.0 mm and the flex modulus is from 80 to 300 MPa. The present invention claims a deformation from 3.1 to 5.0 mm and a flex modulus from 200 to 600 MPa. It would be obvious to one skilled in the art to very the flex modulus and deformation to achieve the desired hardness of the golf ball.

Art Unit: 3711

This is a <u>provisional</u> obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Response to Arguments

Applicant's arguments with respect to claims 1, 2, and 4 have been considered but are most in view of the new ground(s) of rejection. The double patenting rejection is maintained. Applicant's amended claims regarding the flex modulus continues to overlap the ranges claimed in the '693 application.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Raeann Gorden whose telephone number is 703-308-8354. The examiner can normally be reached on M-F 9-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Paul Sewell can be reached on 703-308-2126. The fax phone numbers for the organization where this application or proceeding is assigned are 703-872-9302 for regular communications and 703-872-9303 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-1148.
